

Department of Pathology

Biology and Prevention of Cancer Metastasis

Faculty Mentor: *Jian Cao, MD, Assistant Professor of Medicine and Pathology*

Description

The Cancer Lab at Stony Brook University invites applications for a postdoctoral position in the field of cancer biology to join our different programs focused on three broad areas of cancer metastasis. These programs include characterizing the mechanism of cancer invasion and metastasis, developing tools for early cancer diagnosis, and identifying inhibitory compounds interfering with cancer metastasis. Our projects are supported by the federal government and private foundations. We seek a candidate with extensive experience in cancer biology as well as those from more general molecular biology, genetics, or chemistry backgrounds. Strong interpersonal and communication skills and the ability to work effectively with a wide range of constituencies are preferred.
